

City institute is light years ahead on its 10th birthday

ONE of the city's leading lights is celebrating its 10th birthday.

The Institute of Photonics at Strathclyde University was established to bridge the gap between scientists and the business community and leads the way in laser technology.

To celebrate a decade's success, city firms are to be given a guided tour of the latest technology at an open day later this year.

Tim Holt, the Institute's chief executive, said: "We're proud to be carrying out research which is both commercially relevant and useful."
